

Ubuntu e# bug

Known to affect:

Operating Systems

- ➔ Ubuntu 20.04 (Dell XPS 13)
- ➔ Ubuntu 22.04 (System76 Pangolin)
- ➔ Ubuntu 22.04.1 (System76 Pangolin)

Programs

- Gedit
- GNOME Calculator
- LibreOffice Writer

Description:

This bug will occur `<instance>` and will prevent any input, instead showing the characters e# with an underscore. I originally thought it lasted for the rest of the session, but it turns out it can be mitigated without restarting. I have lost work in the past, and would love to have known I could have mitigated it.

Steps to reproduce:

- Unknown

Steps to mitigate:

1. Emoji menu

- a. Open a program capable of inserting Emojis
- b. Open the Emoji menu (inserting an emoji is optional)
- c. Fixed for now

2. Simple restart

- a. Restart your computer
- b. Hope it doesn't come back within 5 minutes
